### Rain Water Harvesting Process

The college has implemented Rain Water Harvesting to collect and store the rain water and to make optimum utilization in the college premises. The water collected from this process is used in toilets, washrooms and for watering trees.

#### PROCESS

Step 1	The rain water from terrace and ground passes through the pipe lines specially installed for the same.
Step 2	This water passes through the chambers specially constructed for the same and linked to the borewell. To reduce the blockages and dust the nets are fixed on the terrace and also the pebbles are put in the chambers.
Step 3	From borewell, with the help of pump machine the water is supplied to Sintex tank installed on the terrace. To avoid the wastage/overflow of water, the college has installed the autofill water sensor.
Step 4	From the tank installed on terrace of the college building this water is supplied in wash rooms and toilets flush as well as ground floor tap for watering trees.
Step 5	The college building and the attached school building have two separate tanks (capacity of 2,000 L each) on the terrace. Every year water tanks are cleaned.
